

PAN-AFRICAN DIGITAL INFRASTRUCTURE

The fibre powering Africa's next chapter.

African Dream plans, builds and supports resilient fibre infrastructure connecting governments, businesses, communities and opportunity across South Africa and Sub-Saharan Africa.

SOUTH AFRICA · SADC · SUB-SAHARAN AFRICA

Local intelligence. Continental ambition.

African Dream is a pan-African digital infrastructure and project-delivery partner specialising in end-to-end fibre network deployment, open-access connectivity and inclusive digital infrastructure.

We combine physical network delivery, engineering coordination, programme leadership, strategic advisory and partnership facilitation around clear infrastructure outcomes.

01

Fibre infrastructure

Aerial and underground deployment, FTTx, backbone, metro and last-mile connectivity.

02

Design and engineering

Feasibility, site surveys, route planning, wayleaves, capacity and resilient architecture.

03

Operations and maintenance

Testing, fault finding, emergency restoration, preventative maintenance and optimisation.

04

Open-access and wholesale

ISP enablement, carrier partnerships and shared infrastructure models.

05

Project delivery

Programme management, procurement coordination, stakeholder engagement and skills transfer.

06

Connected places

Enterprise, property, mining, education, community and rural connectivity.

HOW WE DELIVER

A disciplined route from need to network.

01	Discover	Define the need, stakeholders and commercial case.
02	Survey	Assess sites, routes, risks and constructability.
03	Design	Engineer a resilient and scalable architecture.
04	Approve	Coordinate wayleaves, permits and communities.
05	Build	Deploy aerial or underground infrastructure safely.
06	Test	Splice, test and document the network.
07	Commission	Bring the network into service with clear acceptance.
08	Maintain	Protect uptime through lifecycle support.

SERVICE REACH

Based in South Africa, with service capability and partnership reach across SADC and wider Sub-Saharan Africa. Final availability is subject to technical feasibility, local regulation and a location-specific assessment.
